Photomultiplier Tube

Photek’s range of photomultiplier tubes (PMTs) provide solutions for analysing ultra fast optical phenomena in a range of applications, including LIDAR, nuclear physics and time correlated photon counting. Photek manufactures 10, 25, and 40 mm PMTs with a variety of photocathodes having high sensitivity in the UV, visible and NIR spectrum. A number of MCP configurations are available to ensure that Photek’s PMTs satisfy all user gain requirements. Photek’s PMTs are the fastest in the world with pulse rise times down to 60 ps and pulse FWHM down to 100 ps. For applications where fast gating is required, the Photek photomultipliers can provide gated speeds to 2 ns.

**APPLICATIONS**
- Analysis of fast optical pulses
- Cherenkov light detection
- Fluorescence spectroscopy
- LIDAR
- Particle & Nuclear physics
- Single photon counting fluorescence
- Time correlated photon counting

**KEY ATTRIBUTES**
- 10, 25 and 40 mm areas as standard, other sizes available upon request
- Single, chevron or z-stack MCP options with gain greater than $10^7$
- Wide range of photocathodes including UV, solar blind, visible and NIR response
- Rise time to 60 ps (model dependant)
- FWHM to 100 ps (model dependant)
- Single photon jitter to 28 ps
- Multi-photon jitter below 10 ps
- Fast pulse output linear up to 1 A
- Fast gating to 2 ns
- Integral 50 ohm output
OPTIONS AVAILABLE

INPUT WINDOW

Photek PMTs are available with a choice of input window materials. These include MgF₂, fused silica, glass and fibre optic, among others.

QUANTUM EFFICIENCY CURVES

Photek offers a full range of second generation photocathodes. These include CsI, Solar Blind, Bialkali, Low Noise S20, S20 and S25 which demonstrate the broad spectral response that can be achieved, as seen below:

GAIN

The Photek PMT can be provided with 1, 2 or 3 micro channel plates for gain greater

TYPICAL PHD

The diagram below shows how the pulse height distribution (PHD) changes with gain. Both the peak/valley ratio and the full width half maximum (FWHM) of the pulse height distribution are used to characterise photon counting tubes.

Note: Detectors with fibre optic input windows will have no response below 300 nm. Specific gating requirements may alter the QE. Please contact the Sales Office to discuss your exact requirements.
EXAMPLE PHD FOR PHOTON COUNTING TUBE

Below is a graph showing the typical single photon PHD for a 2 MCP PMT for increasing voltages. This is a demonstration of how the FWHM can improve with higher voltage:

TRANSIT TIME SPREAD

Below is a graph showing the typical single photon transit time spread (TTS) for a 10 mm 2 MCP PMT:

TYPICAL OUTPUT WAVEFORM

The following two graphs to the right show how the typical output waveform changes with gain and size. The pulse rise time and FWHM are tabulated on the next page.

*Results taken from J. Milnes et al., Recent Developments in Ultra-High Speed and Large Area Photomultiplier Tubes, PoS(ECPD2015)005 of a 1 MCP, 10 mm PMT.
ANODE VOLTAGE

The graph below shows the effect that the anode voltage can have on the pulse shape.

GATE TRANSITION

The ON-OFF gate transition for a PMT110 can be seen below using a GM300-3N 3 ns, 300 kHz gate unit.

ENVIRONMENTAL
Operational Limits: -40 °C to +45 °C
Storage: -40 °C to +60 °C

ENVIRONMENTAL TESTING
For applications where the PMT is exposed to temperature and shock conditions Photek has the appropriate facilities to offer environmental stress screening. Our vibration system offers shock, sine, random, and sine-on-random testing. Our thermal chamber has a temperature range of -75 °C to +160 °C and can control humidity from 10% to 98%.

POWER SUPPLY & GATE UNITS
Photek designs and manufactures a range of power supplies and gate modules for our PMTs. Our power supplies use the very latest in power supply design and are available in bench top format. Our gate modules can gate down to 3 ns with a 300 kHz repetition rate (model dependant) and are used for high brightness or fast optical shutter applications.

PART NUMBERS
PMT part numbers start with PMT and are built up as follows:

Dimensions are indicative and may vary depending on the optics, number of MCPs and housing required.
About Photek

Photek is a specialist manufacturer of vacuum based tubes and camera systems for photon detection. Our product range includes; Camera Systems, Image Intensifiers, Photomultiplier Tubes, Streak Tubes plus a range of associated electronics. We are experts in large area and ultra-high speed imaging and advanced photon counting camera systems.

Our continuing success is built upon continuous innovation and product development and by harnessing and applying knowledge to find solutions for all of our customers’ applications.

Photek is accredited to ISO 9001 and ISO 14001
