

The scope of the Environmental Management System (EMS) applies to the business activities related to the manufacture of vacuum based tubes, camera systems and associated electronics for photon detection, provided / undertaken by Photek Ltd at our location in southeast England.

Photek endeavours to pursue a strategy that not only encompasses all our activities but also that of our suppliers, customers, and stakeholders. In doing this we aim to influence our impact on the environment not only of our business but of all business and organisations that we use or interact with.

As part of our EMS Photek will consider the needs, requirements, and expectations of interested parties, in terms of its overall environmental strategy and performance.

ISO 14001 accreditation and the EMS are essential tools to monitor the environmental impact of Photek on an ongoing basis to ensure that we are constantly reducing our environmental impact, fulfilling our compliance obligations, and that the objectives, measures, and key performance indicators are relevant for the environment in which Photek operates. This ensures our business processes are carefully monitored, measured, and controlled to promote a continual improvement in our environmental performance.

Photek fully accepts its responsibility to protect the environment in all its business activities by adopting best practice industry standards and guidelines.

Luke Strawson  
Photek Quality Manager
